

# Celebrate Darwin Day?

Charles Darwin's birthday, February 12, is a day many humanist organizations celebrate. But what are they celebrating? Go to the San Antonio Bible Based Association Website to find out how Darwin's ideas contributed to the following:

- The belief that man is nothing more than an animal, or worse yet, just a bunch of chemicals and chemical reactions.
- The holocaust in Europe in the 1940s.
- Bad science.
- Making racism and genocide appear "scientific".
- The display of a human being in a zoo as the "missing link".
- The killing of over 70 million people in communist countries.
